

testing::Test

testing::WithParamInterface< T >

testing::TestWithParam< std::string >

CustomFunctionNamingTest

```
classDiagram
    CustomFunctionNamingTest --> testing::TestWithParam
    testing::TestWithParam --> testing::Test
    testing::TestWithParam --> testing::WithParamInterface
```

The diagram illustrates the following relationships:

- CustomFunctionNamingTest** inherits from **testing::TestWithParam< std::string >**.
- testing::TestWithParam< std::string >** inherits from both **testing::Test** and **testing::WithParamInterface< T >**.
