

testing::Test

testing::WithParamInterface< T >

testing::TestWithParam< int >

SeparateInstanceTest

```
classDiagram
    class testingTest["testing::Test"]
    class testingWithParamInterface["testing::WithParamInterface< T >"]
    class testingTestWithParam["testing::TestWithParam< int >"]
    class SeparateInstanceTest

    testingTest <|-- testingTestWithParam
    testingWithParamInterface <|-- testingTestWithParam
    SeparateInstanceTest <|-- testingTestWithParam
```

The diagram illustrates the relationships between four classes in the Google Test framework. At the top, there are two base classes: `testing::Test` on the left and `testing::WithParamInterface< T >` on the right. Below these, in the center, is the class `testing::TestWithParam< int >`. At the bottom is the class `SeparateInstanceTest`. Arrows indicate inheritance: a horizontal line with upward-pointing arrows connects `testing::Test` and `testing::WithParamInterface< T >` to `testing::TestWithParam< int >`. A vertical arrow points from `SeparateInstanceTest` up to `testing::TestWithParam< int >`.
