

DoubleSequence::type

testing::internal::IndexSequence<>

testing::internal::MakeIndexSequenceImpl< 0 >

```
graph BT; A[testing::internal::MakeIndexSequenceImpl< 0 >] --> B[DoubleSequence::type]; A --> C[testing::internal::IndexSequence<>];
```

The diagram illustrates a relationship between three C++ types. At the bottom is a box containing 'testing::internal::MakeIndexSequenceImpl< 0 >'. Two arrows originate from the top edge of this box. One arrow points vertically upwards to the bottom edge of the 'DoubleSequence::type' box on the left. The other arrow points vertically upwards to the bottom edge of the 'testing::internal::IndexSequence<>' box on the right. A horizontal line connects the two vertical lines, forming a U-shape that indicates a common base or specialization relationship.
